# AUTOMATIC CARCASS SPLITTING SYSTEM PCS-4A

## AUTOMATION THAT WORKS

Best & Donovan, the leader in cut and kill floor equipment since 1936, introduces the all new Automatic Carcass Splitter Model PCS-4A. Completely new technology includes heavy gauge stainless steel construction, computer operated motion control systems, and simplified design for easy maintenance, reduced clean-up time and less inventory.

## UNSURPASSED CONSISTENCY

These saws show up every day, every shift. A single operator is required only for inspection—so that mis-hung carcasses can be aborted rather than mis-split, or to make minor adjustments to the cut pattern. You can count on quality splits day after day with 98% total spinal cord exposure for easy removal.

## STATE-OF-THE-ART DESIGN

The PCS-4A is built with USDA approved materials, cutting edge computer hardware and motion control technology, and dependable hydraulic drive systems. An easy-to-use touch screen control unit reports real-time data on all

system functions, and simplifies system adjustments. All critical systems are continually monitored, with immediate indication if any component needs repair or replacement. Optional remote monitors provide real-time information on line speed and production numbers to quality control or plant management offices.

## THE FUTURE IS TODAY

PCS-4A automation increases your profits, lowers your costs and reduces your labor crunch. And you'll get a consistent product perfectly suited for further automation all the way down the line.

**CALL 800/553-2378 NOW FOR MORE DETAILS, INCLUDING A VIDEO DEMONSTRATION, SYSTEM FOOTPRINT AND 3-D DIAGRAM. QUALIFIED CUSTOMERS CAN ARRANGE FOR AN IN-PLANT TRIAL.**
